

4Secure erase[®]

4Secure erase[®]

Introducing the only standalone hardware based tool for erasure of hard disks to IAS5 standards, certified by CESG.

The 4Secure erase is a stand-alone device that quickly and securely erases hard drives. Simply connect a hard drive to the 4Secure erase and at the click of a button it will securely sanitise the drive without the need for additional hardware or software.

Data that has been deleted or incorrectly sanitised can be easily recovered, leading to significant amounts of data remaining present and accessible. This data might be attractive to certain threat actors seeking to exploit ineffective procedures, potentially resulting in the disclosure of sensitive information, reputational damage and regulatory breaches.

CPA Certified Product (IAS5 compliance)

The 4Secure erase has been subjected to a rigorous certification process by CESG under the CPA scheme. Through this formal assurance process the 4Secure erase is able to assert compliance with the highest standards, detailed within HMG IAS5. Therefore guaranteeing the secure erasure of media.

No Additional Licence Costs

Through our unlimited licencing model, the 4Secure erase removes the burden of complicated or costly licencing options. Customers have the ability to conduct as many secure sanitisation/erase activities, throughout the life of the product.

No Additional Software Or Hardware Required

Unlike other products on the market, the 4Secure erase requires no additional hardware or software and is ready to begin securely erasing media out of the box. Simply connect a drive to the 4Secure erase and through its intuitive and user-friendly LCD navigational menu, begin securely erasing at the click of a button.
